

"FIRST Response"

Oil Spill Containment & Protection Boom Systems

Low Cost - High Performance - Environmentally Friendly...

INFLATABLE - MARBOOM can rapidly be deployed with limited manpower from land or vessel in its entire length or quickly be cut to needed length. Due to its flexible material, innovative design and exceptionally high buoyancy to weight ratio, it rides the waves smoothly. Deployment and retrieval is fast and easy. MARBOOM is ideal for use in harbors, inner coastal areas and offshore, as a first response oil spill or debris containment boom. Turbidity and silt barrier booms for permanent long term installations are also available.

PRACTICAL - MARBOOM is delivered flat, ribbon packed in practical recyclable packaging units or on reels. Transportation, handling and storage costs are only fractions of other same size booms. It is now possible to establish a greater readiness on land or sea to a significantly lower investment.

ENVIRONMENTALLY FRIENDLY - MARBOOM is made of a durable and strong LDPE (4)-polyethylene and equipped with a reusable hot-dip galvanized chain, resulting in an exceptional product that is at all times as environmentally friendly as the service it provides!

100% RECYCABLE! - All material, booms and barriers, packaging boxes, reels etc. are 100 % recyclable. MARBOOM is the only boom that can be completely sold back to the industry for reuse to millions of other products or be burned without emitting toxic fumes, reducing your total cost considerably. Regarding the chain... give us a call, or make an easy "do-it-yourself" installation of the chain into a new replacement boom (without chain) for additional savings. The chain can be cleaned and reused by you or returned for credit when purchasing a new boom.

ECONOMICAL - MARBOOM is the most cost effective "Oil Spill Containment and Protection Boom System" on the market today. The cost of a new MARBOOM is less than the cost alone of cleaning any other same size boom... **GUARANTEED!** ...BEST OF ALL, the costly cleaning, handling and storage of messy oil smeared booms is no longer necessary.
